Using e-GGRT to Prepare Your Subpart K Report

Subpart K consists of facilities that use pyrometallurgical techniques to produce any of the following metals: ferrochromium, ferromanganese, ferromolybdenum, ferronickel, ferrosilicon, ferrotitanium, ferrotungsten, ferrovanadium, silicomanganese, or silicon metal.

This page provides an overview of subtopics that are central to Subpart K reporting. This information is entered from the e-GGRT Subpart K Overview web form shown below. Each topic represents a key web form(s) you where you need to enter information:

If you previously reported for Reporting Year (RY) 2011, the Agency has carried some of your RY2011 data forward and entered it in your RY2012 forms to reduce the reporting burden. It is still your responsibility to review and ensure that all of the information in your submission is correct, but the Agency believes that most of the data which is carried forward is unlikely to change significantly from year to year. For more information about carry forward data, please see the [Carry forward of data from previous submissions into RY2012 forms](#) help content.

- Subpart K Emissions Information
- Subpart K Validation Report

Click image to expand

The screenshot displays the EPA e-GGRT web interface for Subpart K: Ferroalloy Production (2011). The page includes a navigation menu with tabs for HOME, FACILITY REGISTRATION, FACILITY MANAGEMENT, and DATA REPORTING. The main content area features an overview of reporting requirements, a table for furnace information, and a validation report link. The table for furnace information has columns for Name/ID, CO₂ (metric tons), CH₄ (metric tons), Status, and Delete. The table is currently empty, with a note indicating that no data has been entered.

Name/ID	CO ₂ (metric tons)	CH ₄ (metric tons)	Status	Delete
none entered				

The end of the page provides links you can use for more detailed information and instructions on entering required information related to each of these topics.

Subpart K Summary Information for this Facility

Subpart K requires you to report the following data about your facility:

- The annual facility ferroalloy product production capacity (this value must be entered into e-GGRT, in short tons)
- Number of electric arc furnaces reported (this value is calculated by e-GGRT)

Subpart K Furnace Information

The required electric arc furnace (EAF) information and the forms associated with required EAF information is entered into e-GGRT are different for EAFs that are monitored by a Continuous Emissions Monitoring System (CEMS) and EAFs that are NOT monitored by a CEMS.

As a result, separate help content has been created in this subpart for entering EAF information for EAFs monitored by CEMS and EAFs NOT monitored by CEMS.

For each EAF **NOT monitored by CEMS** at your facility, Subpart K requires you to report the following information:

- A unique name or identifier, plus optional description for this EAF (see also About Unique Unit Names)
- The following data for each input and output associated with the EAF:
 - A unique name or identifier
 - The general type of input or output

For each EAF **monitored by CEMS** at your facility, Subpart K requires you to report a unique name or identifier, plus optional description for the EAF (see also [About Unique Unit Names](#)).

Subpart K Emissions Information

The required emissions information and the manner by which required emissions information is entered into e-GGRT is different for EAFs that are monitored by a Continuous Emissions Monitoring System (CEMS) and EAFs that are NOT monitored by a CEMS.

As a result, separate help content has been created in this subpart for entering emissions information for EAFs monitored by CEMS and EAFs NOT monitored by CEMS.

For each EAF that is **NOT monitored by CEMS** at your facility, Subpart K requires the following emissions information:

- The annual CO₂ process emissions (the output of Equation K-1, in metric tons)
- For each EAF used for the production of a ferroalloy listed in Table K-1, the annual CH₄ process emissions (the output of Equation K-3, in metric tons)*
- For each Input and Output assigned to an electric arc furnace, Subpart K collects the following data:
 - The method used to determine carbon content (Provided by supplier, ASTM E1941-04, ASTM D5373-08, or ASTM C25-06)
 - An indication if a missing data procedure was used or analysis was repeated to determine carbon content
 - The procedure used to develop substitute data for monthly mass, if applicable (Purchase records or Other)
 - The number of months that missing data procedures were followed to determine monthly mass

**Note, reporting of CH₄ process emissions is only required for ferroalloy types listed in Table K-1. If you do not produce a ferroalloy type listed in this table, enter "0" for your emissions.*

For each **CEMS Monitoring Location**, provide the following information:

- A unique unit name or identifier for the CML (see also [About Unique Unit Names](#))
- An optional description or label for the CML
- The configuration of processes or process units that are monitored by the CML:
 - Single process or process unit that exhausts to a dedicated stack
 - Multiple processes or process units that share a common stack
 - Process or process unit that shares a common stack with one or more stationary fuel combustion units
- The name of each fuel combusted in the unit(s) monitored by the CEMS
- The Tier 4/CEMS methodology start and end dates
- The cumulative total of hourly CO₂ mass emissions for each quarter of the reporting year (metric tons) (*Do not cumulate emissions data between quarters*)
- The total annual CO₂ mass emissions measured by the CEMS (metric tons)
- An indication whether emissions reported for the CEMS include emissions calculated according to 98.33(a)(4)(viii) for a slipstream that bypassed the CEMS
- The total annual biogenic CO₂ emissions from the combustion of all biomass fuels combined (metric tons) (*if not applicable, enter '0'*)
- The total annual non-biogenic CO₂ emissions which includes fossil fuel, sorbent, and process CO₂ emissions (metric tons)
- The total annual CH₄ and N₂O emissions associated with the combustion of all [Table C-2](#) fuels combusted in all processes/process units

monitored by the CEMS derived from application of [Equation C-10](#) (metric tons) (*if there are no combustion emissions in this CML, please enter '0'*)

- The total number of source operating hours in the reporting year
- The total operating hours in which a substitute data value was used in the emissions calculations for the CO₂ concentration parameter
- The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas flow rate parameter
- If moisture correction is required and a continuous moisture monitor is used, the total operating hours in which a substitute data value was used in the emissions calculations for the stack gas moisture content parameter
- An indication of the process units monitored by the CML

Subpart K Validation Report

The Validation Report assists with the completeness and quality of your reporting data.

We strongly encourage you to use the Validation Report to check your work. The Validation Report performs two types of checks:

- Data Completeness: Data required for reporting that are missing or incomplete.
- Data Quality: Data that are outside of the expected range of values.

You may view the Validation Report at any time.

Note that the Validation Report is intended to assist users in entering data, but it is not an indication that the reporter has entered all necessary information, nor is it an indication that the reporter is in compliance with part 98. Furthermore a negative finding on the validation report is not a guarantee that a data element was entered incorrectly.

Subpart K Summary Information for this Facility

This page provides a description of how to enter Subpart K Ferroalloy Production summary information about this facility.

Adding or Updating Summary Information for this Facility

To add or update summary information for this facility, locate the SUBPART K SUMMARY INFORMATION FOR THIS FACILITY table on the Subpart Overview page and click OPEN.

Click image to expand

Subpart K requires you to report the following data about your facility:

- The annual facility ferroalloy product production capacity (this value must be entered into e-GGRT, in short tons)
- Number of electric arc furnaces reported (this value is calculated by e-GGRT)

When you have entered the required information, click SAVE. You should then return to the Subpart K Overview page.

Click image to expand

Subpart K Furnace Information for Furnaces NOT Monitored by CEMS

This page provides step-by-step instructions on how to enter and edit Subpart K Ferroalloy Production furnace information.

Step 1: Add an electric arc furnace (EAF)

To add an EAF that is NOT monitored by a CEMS, find the ELECTRIC ARC FURNACES table on the Subpart Overview page and click the link titled "ADD a Furnace."

To edit or update identification information for an EAF, click the edit icon or the Name/ID link located in the first column of the table.

To delete an EAF, click the delete icon or red "x" located in the last column of the table.

Click image to expand

Step 2: Indicate CEMS utilization for a furnace

For each EAF, confirm whether or not the EAF utilizes CEMS.

Note that when adding a new EAF you are prompted to answer the CEMS question immediately (the answer to this question will default to "No" for EAF added using the "ADD a Furnace" link and will default to "Yes" for units added using the "ADD a Furnace Monitored by CEMS" link).

The CEMS response may be changed here and the EAF information will be relocated to the appropriate table on the Subpart Overview page.

When finished, click SAVE. You will then be directed to another Add/Edit a Unit form.

Click image to expand

Step 3: Enter required furnace information

For each EAF NOT monitored by CEMS at your facility, Subpart K requires you to report the following information:

- A unique name or identifier, plus optional description for this EAF (see also [About Unique Unit Names](#))
- The inputs and outputs associated with the EAF

Step 5: Save all entered information for an EAF

When you are finished entering all required information for a EAF, click SAVE. You will then be directed to the Subpart Overview page. You should see the furnace you just entered listed in the ELECTRIC ARC FURNACE table.

Click image to expand

The screenshot shows the EPA e-GGRT interface for adding an electric arc furnace. The page title is 'Subpart K: Ferroalloy Production'. The main heading is 'ELECTRIC ARC FURNACE INFORMATION'. Below this, there is a brief instruction: 'Subpart K requires a facility to uniquely identify each electric arc furnace and provide the information described below for each. For additional information about adding and editing an electric arc furnace, please use the e-GGRT Help link(s) provided.' A red asterisk indicates a required field. The form is divided into sections: 'UNIT INFORMATION' with a 'Name or ID' field containing 'Unit 3' (40 characters maximum) and an optional 'Description' field; and 'CONTINUOUS EMISSIONS MONITORING' with a radio button selection for 'Is this unit's emissions monitored using a CEMS?' where 'Yes' is selected. At the bottom of the form are 'CANCEL' and 'SAVE' buttons. The footer includes 'Paperwork Reduction Act Burden Statement | Contact Us' and 'e-GGRT/2010.R.45 | K(furnace)'.

Step 6: Repeat Steps 1-5

Repeat Steps 1-5 until all EAFs have been added for your facility. You should then see all EAFs at your facility listed in the ELECTRIC ARC FURNACE SUMMARY TABLE.

HOME | FACILITY REGISTRATION | FACILITY MANAGEMENT | DATA REPORTING

ABC Patrelalum
Subpart K: Ferroalloy Production (2011)
 Subpart Overview

OVERVIEW OF SUBPART REPORTING REQUIREMENTS
 Subpart K requires affected facilities to report carbon dioxide (CO₂) and methane (CH₄) from each electric arc furnace. First, use this page to identify each electric arc furnace and then enter Greenhouse gas (GHG) data required by Subpart K for each electric arc furnace and for your facility. For additional information about Subpart K reporting, please use the e-GGRT Help link(s) provided.

EPA has finalized a rule that defers the deadline for reporting certain data elements used as inputs to emission equations for direct emitters until March 31, 2015. See 76 FR 53657 published August 15, 2011. In accordance with the rule, e-GGRT is not currently collecting this subset of inputs to emission equations.

Subpart K: View Validation

SUBPART K SUMMARY INFORMATION FOR THIS FACILITY

# of Furnaces	Ferroalloy product production capacity (tons)	
0		<input type="button" value="OPEN"/>

ELECTRIC ARC FURNACES

Name/ID	CO ₂ (metric tons)	CH ₄ (metric tons)	Status ¹	Delete
none entered				
<input type="button" value="ADD a Furnace"/>				

ELECTRIC ARC FURNACES (# FURNACES MONITORED BY CEMS)

Name/ID	CO ₂ (metric tons)	CH ₄ (metric tons)	Status ¹	Delete
none entered				
<input type="button" value="ADD a Furnace Monitored by CEMS"/>				

¹ A status of "Incomplete" means that one or more required data elements are incomplete. For details, refer to the Data Completeness validation messages in your Validation Report by clicking the "View Validation" link above (note: if there are no validation messages for this subpart you will not see this link).

Paperwork Reduction Act Burden Statement | Contact Us | e-GGRT/RY2011.R.12 | K(Furnace)

Step 2: Equation K-1 and K-3 Summary and Result

For each EAF that is NOT monitored by CEMS at your facility, Subpart K requires the following emissions information:

- The annual CO₂ process emissions (the output of Equation K-1, in metric tons)
- For each EAF used for the production of a ferroalloy listed in Table K-1, the annual CH₄ process emissions (the output of Equation K-3, in metric tons). Note, reporting of CH₄ process emissions is only required for ferroalloy types listed in Table K-1. If you do not produce a ferroalloy type listed in this table, enter "0" for your emissions.

For assistance in calculating CO₂ and CH₄ process emissions for an EAF, access the calculation spreadsheets for this subpart by clicking one of the links titled "Use K-1, K-3 spreadsheet to calculate," located below the red emissions data entry boxes, then follow the provided instructions.

Step 3: Input and Output values

For each Input and Output assigned to an electric arc furnace, Subpart K collects the following data:

- The method used to determine carbon content (Provided by supplier, ASTM E1941-04, ASTM D5373-08, or ASTM C25-06)
- An indication if a missing data procedure was used or analysis was repeated to determine carbon content
- The procedure used to develop substitute data for monthly mass, if applicable (Purchase records or Other)
- The number of months that missing data procedures were followed to determine monthly mass

Click image to expand

The screenshot shows the EPA e-GGRT interface for Subpart K: Ferroalloy Production. At the top, there are navigation tabs for HOME, FACILITY REGISTRATION, FACILITY MANAGEMENT, and DATA REPORTING. The main content area is titled "Subpart K: Ferroalloy Production" and includes a "Subject Overview" link. Below this, there are two summary boxes: "Annual process CO₂ emissions from an individual EAF" with a value of 850000.0 and "Annual process CH₄ emissions from an individual EAF" with a value of 150.00. The screen also displays the mathematical formulas for Equation K-1 and Equation K-3. Below the formulas, there are input sections for "INPUT" and "OUTPUT" data, including dropdown menus for "Method used to determine carbon content" and checkboxes for "A missing data procedure was used or analysis was repeated to determine carbon content".

Step 4: Save Your Data

When you have finished entering Equations K-1 and K-3 results and Input/Output data, click SAVE. You will then be directed back to the Subpart Overview page. The status of data entry for this furnace in the ELECTRIC ARC FURNACES table should now be "Complete" in the Status column.

After you save the data on this page, the next time you open the page, the calculator on the top of the page will display the CO₂ and CH₄ process emissions, rounded to the nearest 0.1 and 0.01 of a metric ton, respectively. The value displayed is for informational purposes only.

Step 5: Repeat steps 1-4

Repeat Steps 1-4 until emissions and input/output data has been entered for all EAFs NOT monitored by a CEMS. Once you have entered the emissions information, that status of data entry for all furnaces in the ELECTRIC ARC FURNACES table should now be "Complete" in the Status column. If you have missed something, the validation report messages will help you identify any incomplete entries.

Subpart K Emissions Information for Furnaces Monitored by CEMS

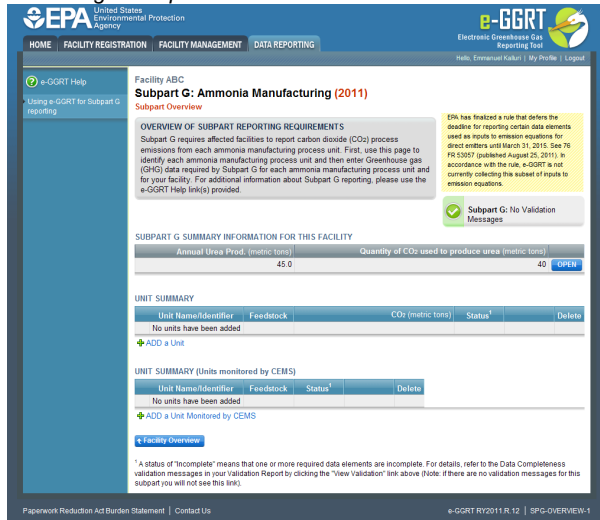

This page provides step-by-step instructions on how to enter and edit Subpart K Ferroalloy Production emissions information for process units (electric arc furnaces) that are monitored by a Continuous Emissions Monitoring System (CEMS). The CEMS MONITORING LOCATION (CML) Summary table will only appear on the Subpart Overview page when you have added an EAF that is monitored by CEMS in the ELECTRIC ARC FURNACES (Furnaces monitored by CEMS) table.

Step 1: Add a CEMS Monitoring Location (CML)

To add a CML, click the "Add a CEMS Monitoring Location" link below the CEMS MONITORING LOCATION (CML) SUMMARY table on the Subpart Overview page

 The screenshot below is from Subpart G and is displayed as an example. The screen for other subparts may differ slightly.

Click image to expand

Step 2: Define a CML and report emissions information

For each CEMS Monitoring Location, provide the following information:

- A unique unit name or identifier for the CML (see also [About Unique Unit Names](#))
- An optional description or label for the CML
- The configuration of processes or process units that are monitored by the CML:
 - Single process or process unit that exhausts to a dedicated stack
 - Multiple processes or process units that share a common stack
 - Process or process unit that shares a common stack with one or more stationary fuel combustion units
- The types of fuel combusted in the unit(s) monitored by the CEMS
- The Tier 4/CEMS methodology start and end dates
- The quarter total of hourly CO₂ mass emissions for each quarter of the reporting year (metric tons) (*Do not cumulate emissions data*)

- between quarters)*
- The total annual CO₂ mass emissions measured by the CEMS (metric tons)
 - An indication whether emissions reported for the CEMS include emissions calculated according to 98.33(a)(4)(viii) for a slipstream that bypassed the CEMS
 - The total annual biogenic CO₂ emissions from the combustion of all biomass fuels combined (metric tons) (*if not applicable, enter '0'*)
 - The total annual non-biogenic CO₂ emissions which includes fossil fuel, sorbent, and process CO₂ emissions (metric tons)
 - The total annual CH₄ and N₂O emissions associated with the combustion of all [Table C-2](#) fuels combusted in all processes/process units monitored by the CEMS derived from application of [Equation C-10](#) (metric tons) (*if there are no combustion emissions in this CML, please enter '0'*)
 - The total number of source operating hours in the reporting year
 - The total operating hours in which a substitute data value was used in the emissions calculations for the CO₂ concentration parameter
 - The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas flow rate parameter
 - If moisture correction is required and a continuous moisture monitor is used, the total operating hours in which a substitute data value was used in the emissions calculations for the stack gas moisture content parameter
 - The total annual CO₂ emissions from the CEMS Monitoring Location (CML) Summary attributable to combustion (metric tons)

Do not leave any of these fields blank. If, for example, your facility has no biogenic CO₂ emissions, enter '0'.

For assistance in calculating annual CH₄ and N₂O emissions using [Equation C-10](#), access the optional calculation spreadsheet by clicking one of the links titled "[Use Equation C-10 spreadsheet to calculate](#)" located below each of the red emissions information data entry boxes and follow the provided instructions

Step 3: Identify process units monitored at a CML

To identify the process units monitored at a CML, first click the link titled "ADD/REMOVE a process unit that exhausts to this CEMS Monitoring Location" at the bottom of the page

The screenshot below is from Subpart G and is displayed as an example. The screen for other subparts may differ slightly.

 Subpart G Overview • Add/Edit CEMS Monitoring Location

CONTINUOUS EMISSION MONITORING SYSTEM (CEMS) MONITORING LOCATION (CML) INFORMATION
 Use this page to uniquely identify each CEMS Monitoring Location (CML) Summary and provide the annual GHG emissions and other information described below. Use the "ADD/REMOVE a Process Unit" link at the bottom of the page to identify the process unit(s) monitored by this CEMS Monitoring Location (CML) Summary. For additional information about the data collected on this page, please use the e-GGRT Help link(s) provided.

CONFIGURATION
 CEMS Monitoring Location Name/ID: (40 characters maximum)
 Description (optional):
 Configuration Type: Select
 Types of fuel combusted in the unit(s) monitored by the CEMS: (200 characters maximum)

TIER 4 METHODOLOGY INFORMATION
 Calculation Methodology Start Date: 01/01/2011
 Calculation Methodology End Date: 12/31/2011

QUARTERLY CO₂ EMISSIONS
 Quarter 1: (metric tons)
 Quarter 2: (metric tons)
 Quarter 3: (metric tons)
 Quarter 4: (metric tons)

ANNUAL CO₂ EMISSIONS
 Total annual CO₂ mass emissions (biogenic and non-biogenic) measured by the CEMS: (metric tons)
 Check this box to indicate that the emissions reported for the CEMS include emissions calculated according to 40 CFR 60.140(i)(ii) for a dipstream that bypassed the CEMS.
 Total annual biogenic CO₂ mass emissions: (metric tons)
 Total annual non-biogenic CO₂ mass emissions (includes fossil fuel, sorbent, and process CO₂ emissions): (metric tons)

EQUATION C-10 SUMMARY AND RESULTS

$$CH_4 \text{ or } N_2O = 0.001 * (F) * EF$$
 Hover over an element in the equation above to reveal a definition of that element.
 Enter CH₄ and N₂O emissions from only combustion of Table C-2 Fuels directly below. If there are no combustion emissions from Table C-2 Fuels in this CEMS Monitoring Location, please enter 0.
 Total CH₄ emissions: (metric tons) [Use Equation C-10 spreadsheet to calculate]
 Total N₂O emissions: (metric tons) [Use Equation C-10 spreadsheet to calculate]

ADDITIONAL EMISSIONS INFORMATION
 Total number of source operating hours in the reporting year: (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for CO₂ concentration: (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for stack gas flow rate: (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for stack gas moisture content (if moisture correction is required and a continuous moisture monitor is used): (hours)

CEMS MONITORING LOCATION PROCESS UNITS
 Process Unit Name/Identifier: [There are no process units monitored by CEMS available for selection.]
 ADD/REMOVE/EDIT a process unit that exhausts to this CEMS Monitoring Location
 CANCEL SAVE

On the CML Process Units Selection page, use the check boxes to select the process unit(s) monitored at this CML. This will indicate that the unit(s) selected vent emission through the stack monitored by this CML.

The screenshot below is from Subpart G and is displayed as an example. The screen for other will differ slightly depending on the number of units with emissions monitored by a single CML at your facility.

 Is this process unit monitored by the CEMS Monitoring Location? (check if true)
 CANCEL SAVE

Subpart Y also collects the CO₂ emissions from this CEMS Monitoring Location that are attributable to process CO₂ emissions from this process

unit (metric tons).

Click image to expand

The screenshot shows the EPA e-GGRT interface for 'Facility ABC (2010) Subpart Y: Petroleum Refineries'. The main heading is 'IDENTIFY PROCESS UNITS'. Below this, there are three sections for different process units:

- PROCESS UNIT: CEMS1**: A checkbox is checked for 'Is this process unit monitored by the CEMS Monitoring Location?'. The 'CO₂ emissions from this CEMS Monitoring Location that are attributable to process CO₂ emissions from this process unit' is entered as '8000' (metric tons).
- PROCESS UNIT: CEMS3**: A checkbox is checked for 'Is this process unit monitored by the CEMS Monitoring Location?'. The 'CO₂ emissions from this CEMS Monitoring Location that are attributable to process CO₂ emissions from this process unit' is entered as '7100' (metric tons).
- PROCESS UNIT: CEMS2**: A checkbox is unchecked for 'Is this process unit monitored by the CEMS Monitoring Location?'. The 'CO₂ emissions from this CEMS Monitoring Location that are attributable to process CO₂ emissions from this process unit' field is empty.

At the bottom of the form are 'CANCEL' and 'SAVE' buttons. A small red asterisk indicates a required field.

When finished selecting process unit for the CML and entering additional required information (if applicable), click SAVE. You should then be directed back to the Add/Edit a CML Location form and see the units you selected listed in the CEMS MONITORING LOCATION (CML) PROCESS UNITS table.

Step 4: Save entered data for a CML

When you have finished entering data for a CML, click SAVE. You will then return to the Subpart Overview page. You will see the status of data entry for the CML updated to "Complete" in the Status column in the CEMS MONITORING LOCATION (CML) SUMMARY table.

If you don't have all the data, you can enter some now, save it, and finish later by clicking on the hyperlinked name of the CML in the CEMS MONITORING LOCATION (CML) SUMMARY table.

After you save the data on this page, the next time you open the page, the calculator on the top of the page will display the CO₂ process emissions for the CML, rounded to the nearest 0.1 of a metric ton. The value displayed is for informational purposes only.

Note: the screenshot below is from Subpart G and is displayed as an example. The screen for other subparts will differ slightly.

Facility ABC
Subpart G: Ammonia Manufacturing (2011)
 Subpart G Overview • Add/Edit CEMS Monitoring Location

CONTINUOUS EMISSION MONITORING SYSTEM (CEMS) MONITORING LOCATION (CML) INFORMATION
 Use this page to uniquely identify each CEMS Monitoring Location (CML) Summary and provide the annual GHG emissions and other information described below. Use the "ADD/REMOVE a Process Unit" link at the bottom of the page to identify the process unit(s) monitored by this CEMS Monitoring Location (CML) Summary. For additional information about the data collected on this page, please use the e-GGRT Help link(s) provided.

CONFIGURATION
 CEMS Monitoring Location Name/ID (40 characters maximum)
 Description (optional)
 Configuration Type * Select
 Types of fuel combusted in the unit(s) monitored by the CEMS (200 characters maximum)

TIER 4 METHODOLOGY INFORMATION
 Calculation Methodology * 01/01/2011 Start Date
 Calculation Methodology * 12/31/2011 End Date

QUARTERLY CO₂ EMISSIONS
 Quarter 1 (metric tons)
 Quarter 2 (metric tons)
 Quarter 3 (metric tons)
 Quarter 4 (metric tons)

ANNUAL CO₂ EMISSIONS
 Total annual CO₂ mass emissions (biogenic and non-biogenic) measured by the CEMS (metric tons)
 Check this box to indicate that the emissions reported for the CEMS include emissions calculated according to 40 CFR 60.1410 for a dipstream that bypassed the CEMS.
 Total annual biogenic CO₂ mass emissions (metric tons)
 Total annual non-biogenic CO₂ mass emissions (includes fossil fuel, sorbent, and process CO₂ emissions) (metric tons)

EQUATION C-10 SUMMARY AND RESULTS

$$CH_4 \text{ or } N_2O = 0.001 \times (F) \times EF$$
 Hover over an element in the equation above to reveal a definition of that element.
 Enter CH₄ and N₂O emissions from only combustion of Table C-2 Fuels directly below. If there are no combustion emissions from Table C-2 Fuels in this CEMS Monitoring Location, please enter 0.
 Total CH₄ emissions (metric tons) Use Equation C-10 spreadsheet to calculate
 Total N₂O emissions (metric tons) Use Equation C-10 spreadsheet to calculate

ADDITIONAL EMISSIONS INFORMATION
 Total number of source operating hours in the reporting year (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for CO₂ concentration (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for stack gas flow rate (hours)
 The total operating hours in which a substitute data value was used in the emissions calculations for stack gas moisture content (if moisture correction is required and a continuous moisture monitor is used) (hours)

CEMS MONITORING LOCATION PROCESS UNITS
 Process Unit Name Identifier
 There are no process units monitored by CEMS available for selection.
 ADD/REMOVE/EDIT a process unit that exhausts to this CEMS Monitoring Location
 CANCEL SAVE

Step 5: Repeat Steps 1-4

Repeat Steps 1-4 until emissions information has been entered for all CMLs. If you have missed something, the validation report messages will help you identify any incomplete entries.

Using Subpart K Calculation Spreadsheets

These optional spreadsheets are provided to assist reporters in calculating emissions and in keeping records of these calculations.

Reporters are required to keep records of these calculations under 40 CFR 98.3(g) and additional subpart-specific provisions, but are not required to use these spreadsheets or to submit any spreadsheets to EPA.

Spreadsheets may include inputs to emission equations, reporting some of which EPA deferred until 2015. (See 76 FR 53057, published August 25, 2011, <http://www.gpo.gov/fdsys/pkg/FR-2011-08-25/pdf/2011-21727.pdf>).

Overview

This help page provides guidance for working with the supplemental Subpart K Calculation Spreadsheet. The guidance provides step-by-step instructions for the following tasks:

- [Downloading the Calculation Spreadsheet](#)
- [General Information on Using a Calculation Spreadsheet](#)
- [Using the Equation K-1, K-3 Calculation Spreadsheet](#)

Downloading the Calculation Spreadsheet

The calculation spreadsheet for Subpart K may be downloaded by clicking the link in the first column of the table below. Users may also jump to instructions for each calculation spreadsheet by clicking the link in the second column.

Calculation Spreadsheet (click to download)	Instructions (click to view)
Equation K-1, K-3 Calculation Spreadsheet.xls	K-1, K-3 Help

General Information on Using a Calculation Spreadsheet

The guidance provided in this section applies to calculation spreadsheets for all subparts. Additional guidance specific to Subpart K is provided in the following section.

Color coding

The calculation spreadsheets contain green input cells, gray informational cells, and red-bordered results cells filled with yellow or white. Users should use green input cells to enter all data specific to their facility, unit, or process. Gray informational cells contain parameter names, column and row headings, equation constants and subtotals. Calculation results are displayed in red-bordered results cells filled with yellow or white. For red-bordered, yellow-filled results cells, the values in these cells should be entered in the appropriate and separate calculation spreadsheet (as directed below cell) where additional calculations will be made. For red-bordered, white filled results cells, the values in these cells should be entered in e-GGRT for the appropriate process units. All cells that are not green input cells are locked and cannot be modified.

	Green input cell (data entry)
	Gray informational cells (locked)
	Red-bordered, yellow-filled results cells (enter in appropriate and separate calculation spreadsheet)
	Red-bordered, white filled results cells (enter in e-GGRT)

Stop and Warning Messages

The calculation spreadsheets will display a stop message if the user enters a value that is invalid or a warning message if the user enters a value outside the EPA estimated range for a particular data element. For invalid data entries, the stop messages will not allow a user to proceed and the user must reenter valid data before moving forward. For data entries that are outside the EPA estimated range for a particular data element, the warning messages will allow a user to proceed if the user deems the entered value to be accurate.

Using the Equation K-1, K-3 Calculation Spreadsheet

Use the Equation K-1, K-3 Calculation Spreadsheet to calculate the annual CO₂ and CH₄ process emissions from an electric arc furnace. A

separate spreadsheet is to be used for each furnace. Users should not use aggregated data from multiple furnaces in a single calculation spreadsheet. The Equation K-1, K-3 Calculation Spreadsheet performs the calculations using Equations K-1 and K-3, provided below (see calculation spreadsheet for definitions of variables).

(Equation K-1)

$$\begin{aligned}
 E_{CO_2} = & \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^i \left(M_{reducing\ agent_i} \times C_{reducing\ agent_i} \right) \\
 & + \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^m \left(M_{electrode_m} \times C_{electrode_m} \right) \\
 & + \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^h \left(M_{ore_h} \times C_{ore_h} \right) \\
 & + \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^j \left(M_{flux_j} \times C_{flux_j} \right) \\
 & - \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^k \left(M_{product\ outgoing_k} \times C_{product\ outgoing_k} \right) \\
 & - \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^l \left(M_{non-product\ outgoing_l} \times C_{non-product\ outgoing_l} \right)
 \end{aligned}$$

(Equation K-3)

$$E_{CH_4} = \sum_1^i \left(M_{product_i} \times \frac{2000}{2205} \times EF_{product_i} \right)$$

Begin by entering the facility name, your name, the furnace name or identifier, the reporting period and any additional comments in the green input cells of the General Information table located immediately below the equations in the calculation spreadsheet. This is for your records.

Facility Name:	
Reporter Name:	
Unit Name/ ID:	
Reporting Period:	
Comments:	
Unit Type:	EAF

Next, enter the requested information in the green input cells of the input data tables.

Input Data for Reducing Agents

Space for up to five materials is provided.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	i=1	i=2	i=3	i=4	i=5
$[M_{\text{reducing agent } i}]$ = Annual mass of reducing agent i fed, charged, or otherwise introduced into the EAF (tons)					
$[C_{\text{reducing agent } i}]$ = Carbon content in reducing agent i (percent by weight, expressed as a decimal fraction)					

Input Data for Electrodes

Space for up to five materials is provided. Use additional copies of this spreadsheet for additional materials.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	m=1	m=2	m=3	m=4	m=5
$[M_{\text{electrode } m}]$ = Annual mass of carbon electrode m consumed in the EAF (tons)					
$[C_{\text{electrode } m}]$ = Carbon content of the carbon electrode m (percent by weight, expressed as a decimal fraction)					

Input Data for Ore

Space for up to five materials is provided. Use additional copies of this spreadsheet for additional materials.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	h=1	h=2	h=3	h=4	h=5
$[M_{\text{ore } h}]$ = Annual mass of ore h charged to the EAF (tons)					
$[C_{\text{ore } h}]$ = Carbon content in ore h (percent by weight, expressed as a decimal fraction)					

Input Data for Flux

Space for up to five materials is provided. Use additional copies of this spreadsheet for additional materials.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	j=1	j=2	j=3	j=4	j=5
$[M_{\text{flux } j}]$ = Annual mass of flux material j fed, charged, or otherwise introduced into the EAF to facilitate slag formation (tons)					
$[C_{\text{flux } j}]$ = Carbon content in flux material j (percent by weight, expressed as a decimal fraction)					

Input Data for Product

Space for up to five materials is provided. Use additional copies of this spreadsheet for additional materials.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	k=1 or i=1	k=2 or i=2	k=3 or i=3	k=4 or i=4	k=5 or i=5
$[M_{\text{product } k}]$ = Annual mass of alloy product k tapped from EAF (tons)					
$[C_{\text{product } k}]$ = Carbon content in alloy product k (percent by weight, expressed as a decimal fraction)					
$[EF_{\text{product } k}]$ = CH_4 emission factor for alloy product k from Table K-1 in this subpart (kg of CH_4 emissions per metric ton of alloy product k)					

Input Data for non-Product Outgoing Material

Space for up to five materials is provided. Use additional copies of this spreadsheet for additional materials.

Use additional copies of this spreadsheet for additional materials (i.e, use multiple spreadsheets to calculate contributions to E_{CO_2} and E_{CH_4} , and add the contributions prior to entering in eGGRT).

	l=1	l=2	l=3	l=4	l=5
$[M_{\text{non-product outgoing } l}]$ = Annual mass of non-product outgoing material l removed from EAF (tons)					
$[C_{\text{non-product outgoing } l}]$ = Carbon content in non-product outgoing material l (percent by weight, expressed as a decimal fraction)					

The calculation spreadsheet will then calculate the annual CO_2 and CH_4 process emissions from this electric arc furnace. The calculated values will be displayed in red-bordered cells in the K-1, K-3 Results tables at the bottom of the spreadsheet. This value should be entered in e-GGRT for this furnace.

Annual CO_2 Emissions (metric tons) from Equation K-1

$[E_{CO_2}]$ = Annual process CO_2 emissions from an individual EAF (metric tons)	0.00
---	------

Enter this value in e-GGRT

Annual CH_4 Emissions (metric tons) from Equation K-3

$[E_{CH_4}]$ = Annual process CH_4 emissions from an individual EAF (metric tons)	0.00
---	------

Enter this value in e-GGRT
