

## **Q613. Is there any way we can get unlocked subpart W screening spreadsheets from the applicability tool?**

### **Q613. Is there any way we can get unlocked subpart W screening spreadsheets from the applicability tool?**

**A613.** No. EPA's intention in posting subpart W calculation utilities is to provide facilities with a simple tool for estimating emissions when determining applicability. Additionally, the tools include a guidance and source tab to document how emission estimates were calculated. The utilities are only a guide to help facilities determine their subpart W applicability. If you suspect a facility may exceed the annual 25,000 metric ton CO<sub>2</sub>e threshold, you should refer to the calculation methodologies in 98.233 to determine emissions.
