

Q558. May average blowdown volumes be used for industry segments (processing, transmission, and LNG imports-exports) where reporting of this emission source is required?

Q558. May average blowdown volumes be used for industry segments (processing, transmission, and LNG imports-exports) where reporting of this emission source is required?

A558. No, reporters must follow methods provided in §98.233(i) of the rule for determining unique physical volumes between isolation valves.
