

Critical Validation Checks

Certain validation checks which are considered critical errors must be corrected before you can successfully generate your submission package or upload your XML-based submission. These checks are presented to the reporter when they attempt to generate or regenerate their submission or after they attempt to upload an XML-based submission. These checks are signified with a stop sign in your validation report. The pages below provides a lists of critical errors for each subpart. Additional technical information that may assist XML uploaders is also available at [XML Upload Critical Errors](#). If you feel that you have triggered one of these checks in error, or if there's a reason why your report should be submitted despite the check being triggered, you may submit a request to the e-GGRT Help Desk at GHGReporting@epa.gov.
