Subpart OO. Suppliers of Industrial Greenhouse Gases

Subpart OO. Suppliers of Industrial Greenhouse Gases

- Q390. How do I report imports and exports of refrigerant blends that contain both HCFCs and HFCs?
- Q287. How does one handle the calculation of blends such as R-410A? Do we calculate on the basis of the components, e.g., HFC-125 and HFC-32?
- Q363. Does the information from the Reporting Forms populate e-GRRT fields or are they just uploaded files? If automatically populated, are these values available for review before submitting the report?
- Q364. How do I calculate addition to the "net supply"?
- Q365. Why do net additions of GHGs have to be added manually when they already exist in the uploaded forms?
- Q366. Can we upload multiple copies of the same file if we have more than 10 processes?
