## Welcome to the FLIGHT Help Content!

The **Facility Level Information on Greenhouse Gases Tool** (FLIGHT) gives you access to greenhouse gas data reported to EPA by large emitters, facilities that inject CO2 underground, and suppliers of products that result in GHG emissions when used in the United States. FLIGHT allows you to view data in several formats including maps, tables, charts and graphs for individual facilities or groups of facilities. You can search the data set for individual facilities by name or location or filter the data set by state or county, fuel type, industry sectors and sub-sectors, annual facility emission thresholds, and greenhouse gas type. You can also compare emission trends over time and download data generated as a product of your analyses.

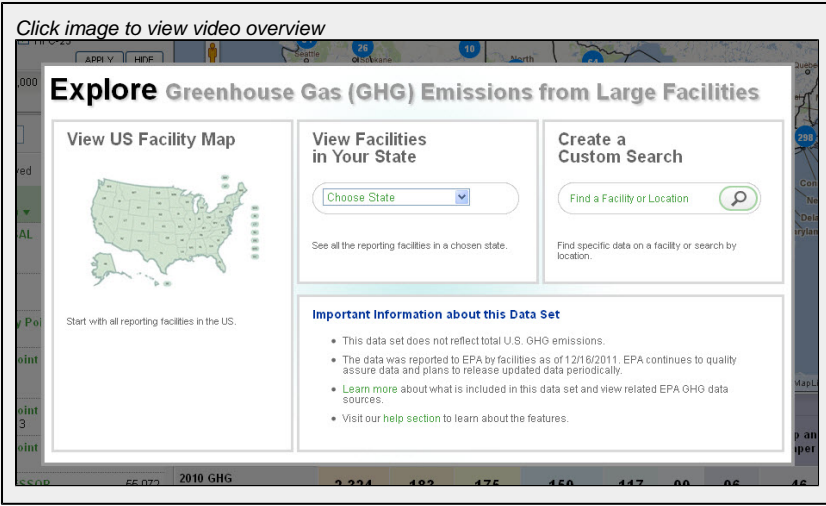

Click this link to access FLIGHT at [ghgdata.epa.gov](http://ghgdata.epa.gov).

**Explore Greenhouse Gas (GHG) Emissions from Large Facilities**

**View US Facility Map**

Start with all reporting facilities in the US.

**View Facilities in Your State**

Choose State

See all the reporting facilities in a chosen state.

**Create a Custom Search**

Find a Facility or Location

Find specific data on a facility or search by location.

**Important Information about this Data Set**

- This data set does not reflect total U.S. GHG emissions.
- The data was reported to EPA by facilities as of 12/16/2011. EPA continues to quality assure data and plans to release updated data periodically.
- Learn more about what is included in this data set and view related EPA GHG data sources.
- Visit our [help](#) section to learn about the features.

This short video demonstrates the features of FLIGHT, providing a few examples of the types of queries that can be performed.
