

Q354. Do the emission formulas differ from those used in LandGEM?

Q354. Do the emission formulas differ from those used in LandGEM?

A354. LandGEM may be used for calculating modeled methane generation under subpart HH. Note that although LandGEM may be used directly for bulk MSW, it is not available by waste type. LandGEM may still be used, but separate runs would need to be done to model different types of waste. See [FAQ10](#) for information on how to adhere to the rule when using LandGEM.
