

## **Q433. What is EPA's plan for incorporating the GHG Reporting Program data into the U.S. GHG Inventory?**

**Q433. What is EPA's plan for incorporating the GHG Reporting Program data into the U.S. GHG Inventory?**

**A433.** EPA's GHGRP dataset and the data presented in the US Inventory of Greenhouse Gas Emissions and Sinks report are complementary. The Inventory was used to guide the development of the GHGRP, particularly in terms of scope and coverage of both sources and gases. The GHGRP dataset continues to be an important resource for the Inventory, providing not only annual emissions information, but also other annual information, such as activity data and emission factors that can improve and refine national emission estimates and trends over time. GHGRP data also allow EPA to disaggregate national inventory estimates in new ways that can highlight differences across regions and sub-categories of emissions, along with enhancing application of QA/QC procedures and assessment of uncertainties. EPA uses annual GHGRP data in a number of categories to improve the national estimates presented in this Inventory consistent with IPCC guidance.
